

1. Let  $S$  be the set of all integers of the form  $P^2 - 1$  where  $P$  is a prime number greater than 5. Let  $N$  be the largest integer that divides every member of  $S$ . Find, with proof, the value of  $N$ .
2. In triangle  $ABC$ ,  $(\cos B)(\cos C) = \cos A$ . Find, with proof, the numerical value of  $(\tan B)(\tan C)$ .
3. Suppose that  $n + 1$  boys are lined up shoulder-to-shoulder from left to right in a straight line. Prove that it is always possible to select  $n + 1$  boys to take one step forward so that, going from left to right, their heights are either consistently increasing or consistently decreasing.
4. The lengths of the sides of triangle  $ABC$  are in the ratio of 4:5:6. The bisector of the largest angle of the triangle is drawn. Prove that one of the two triangles formed also has sides whose lengths are in the ratio of 4:5:6.
5. All the factors of the polynomial  $P(x) = x^3 + ax^2 + bx + b$  are linear with integer coefficients, and neither  $a$  nor  $b$  are zero or one. Find all possible pairs  $(a, b)$ , and prove that you have found them all.
